# TAKE THE SIMPLE WAY

New Web service:  
**“Markup to Daisy”**  
simplifies the process  
of creating Daisy  
full-text content.

A new web service is open to organisations, publishers and individuals, who want to make their content accessible to the print disabled community and to other users.

## All you need to do

All you need to do is insert a few markers in your Word-document for the mark-up you want, and upload the file to this web service. The web service will return your Word-file fully marked-up, based on a thorough analysis of the document.

Your next action is to proofread the text, to check the resulting mark-up and to correct the problems that were identified in the document.

After another upload, the web service will return your document as an xml-file in the Daisy DTBook-format, ready for use by you or by your customers!

## The mark-up can include:

- / Basic division of structure into front-, body- and rearmatter
- / Headings up to 6 levels (+ a level for “unknown” headings)
- / Handling of special characters (<, >, & and many more)
- / Pages: Roman and or Arabic numbering as specified by you
- / Emphasis: Bold, Italics, Underline (and combinations of these)
- / Images
- / Tables
- / Other features will be added as developed.

### **Is it free? No - and yes.**

For a start, we'll allow individuals, publishers and organisations to process a reasonable amount of pages free of charge. Later in 2008 the service will be provided on a pay-per-page basis.

### **How much will I be charged? \***

Each page will cost 0,24 € for the standard service\*, and the amount will be charged directly to your credit card through a secure payment system. Large documents without page breaks will be charged/counted by the file size. Organisations will receive a monthly invoice.

### **What will I get?**

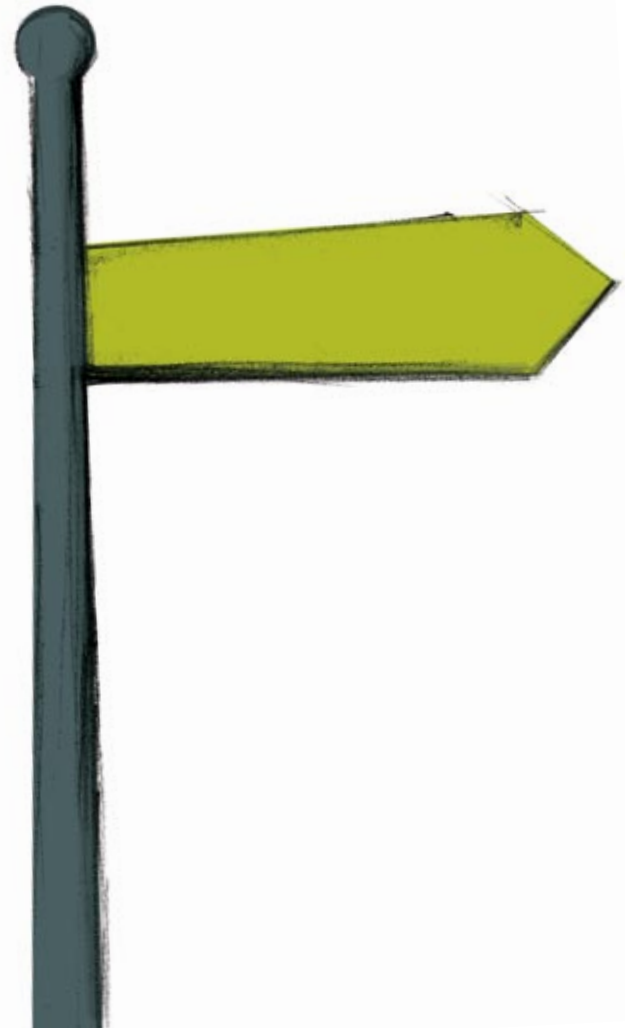

This web service offer much more than just plain "Save as Daisy": This is your short cut to true automation of the entire mark-up process, and this service will save a lot of your time. The service can be tailored to meet exactly the needs that you have.

### **What should I do?**

To try this service, please register at [www.daisymarkup.com](http://www.daisymarkup.com). If you are with an organisation or a Publishing company you should register as mentioned above. You should also contact [niels@xml-tekst.dk](mailto:niels@xml-tekst.dk) in order to get an account that will match your testing needs, to learn more about the possibility of receiving efficient correction tools along with your documents, and to have the markup tailored to your specific needs.

### **What if I have comments, questions or suggestions?**

Please contact [daisymarkup@xml-tekst.dk](mailto:daisymarkup@xml-tekst.dk)

*\* pricing and feature details are not yet finalised.*

*xml-tekst is a company specialising in all aspects of mark-up of text products into Daisy full-text books from xml-files in the DTBook-format. We have a very long history of mark-up knowledge, as well as a very long history of Daisy-work. We were the first to produce Daisy Full text books in substantial quantities, and we were the first to use semi-automated tools developed in-house for this kind of production. Currently xml-tekst is making dtbook-files for different organisations in Scandinavia and in the EU. We are opening our tools for use by individuals, companies and publishers.*

*xml-tekst is a member of the Daisy Consortium as a 'friend', and we actively support Daisy as the best way to read and the best way to publish.*
